

It is claimed:

1. A system using transaction events to generate user incentives:

a host computer for transmitting a user identification profile:

a server computer under the control of software components, wherein the components comprise:

a transaction event module for generating points based upon a transaction event.

a Point Exchange Module for exchanging points;

wherein the server computer updates the identification profile based upon the transaction event or point conversion.

2. The system of claim 1, wherein the software components of the server computer further comprise, a Point Conversion Module for converting points to units.

3. The system of claim 1, wherein the Point Exchange Module exchanges points for a "value" selected from the group consisting of equity, cash, product and services.

4. The system of claim 1, wherein the Point Exchange Module further comprises a Point Auction Module for selling or purchasing points.
